

Addi & Sentro Knitting Machine

Quick Tips

Tips for Choosing Yarn:

- Light (3) or Worsted (4) weight yarn
- Smooth texture and low pilling yarns
- Synthetic fibers, generally, work better
- Pull from center of skein for ease

Casting On & Off:

- First Row: alternate every other tooth/pin
- Start and end the hat with a different colored “waste yarn” to make picking up stitches easier later.

More Tips:

- Keep a consistent tension (tight tension results in a smaller hat).
- Magnets can help hold down your work (once it gets longer and starts curling)
- Dropped Stitches, if it keeps happening, cast off and try a different yarn.
- Work any snags out gently to prevent the little plastic teeth on your machine from being damaged.

Don't give up! I promise you got this! Sometimes all it takes it's a break and fresh eyes to figure it out!
